

Primus Security Scan Report

Scan Date: 2025-12-17 13:48:23 UTC

Duration: 300.00 seconds

Files Scanned: 142

Status: **FAILED**

Summary of Findings

Severity	Count
Critical	1
High	1
Medium	1
Low	1

Detailed Findings

Critical: AWS Access Key Found

Critical

Rule: SEC-001

A hardcoded AWS Access Key ID was detected in source code. This poses a significant risk of account compromise.

Location: src/Services/AwsConnector.cs:42

Remediation: Revoke the exposed key immediately. Use Azure Key Vault or AWS Secrets Manager to store credentials securely.

High: SQL Injection Vulnerability

High

Rule: CWE-89

Unsanitized user input is concatenated directly into a SQL query string.

Location: src/Data/UserRepository.cs:128

Remediation: Use parameterized queries or an ORM like Entity Framework Core.

Primus Security Scan Report

Medium: Weak Cryptography (MD5)

Medium

Rule: CRYPTO-005

MD5 is a weak hashing algorithm and should not be used for security purposes.

Location: src/Utils/LegacyHasher.cs:15

Remediation: Migrate to SHA-256 or stronger algorithms.

Low: Missing Secure Cookie Flag

Low

Rule: CONF-002

Authentication cookies are missing the 'Secure' flag.

Location: appsettings.json:10

Remediation: Enable the 'Secure' flag to ensure cookies are only transmitted over HTTPS.
